

Quarterly Update

June 2026

Investment Objective

Courser Park Advisors ("CPA") uses a proprietary framework that combines fundamental and quantitative factors to identify businesses that can create long term wealth. The guiding philosophy is capital protection and compounding over longer periods by investing in companies with durable business models that can generate higher returns on capital over time. The singular goal and focus – invest only in those companies which have the lowest odds of permanent loss.

Chart 1: Strategy Returns¹- GARP Scheme

¹ The above returns are calculated by using the Time-Weighted Rate of Return (TWRR) method across all portfolios (Absolute returns for less than 1 year). The above returns are as on 30-06-2026, post fees and expenses; Note: Returns of individual clients will differ based on the timing of their investments.

Top Performers

Scrip Name	Purchase Date	Purchase Price (Rs.)	CMP (Rs.) as of 30-06-2026	Return (%)
Acutaas Chemicals	21-Nov-2024	1,033	3,526	241%
Navin Fluorine	24-Apr-2024	3,307	7,687	132%
Nuvama Wealth	01-Apr-2024	926	1806	95%
Emcure Pharma	10-Oct-2024	1,020	1,836	80%
ASK Automotive	01-Apr-2024	283	449	59%

Holding Companies*

Asset Concentration	Holding
Cash	5.2%
Top 5 Holdings	27.9%
Top 10 Holdings	50.3%
Highest Exposure	ACUTAAS (6.4%)

Sector Allocation*

Sectors	Allocation (%)
Healthcare/Pharma	32%
BFSI	23%
Capital Goods	11%
Technology/IT Services	9%
Others	25%

Market Capitalization*

Market Capitalization	Holding (%)
Large Cap	41%
Mid Cap	30%
Small Cap	29%
Avg. Market Cap (Rs. Bn)	1,363

Qualitative Analysis*

Parameters	TTM
PAT Growth	39.3%
PE	50.5x
ROE	19.8%

Mr Market too is like topography

Two frustrating years, then suddenly the portfolio is up 20% in a quarter and two-year alpha snaps back to ~5%. This is exactly the moment *not* to start the relative-comping rigmarole — moving the goalpost, benchmarking ourselves against the top-performing funds of the moment, and feeling frustrated all over again.

This is the moment for quiet composure. Markets are volatile by nature and the best reaction, most of the time, is no reaction.

All the predictions about the Iran war spiralling into a world war, oil hitting \$200 a barrel, and Space X stock going to Mars have all been debunked. I get the same feeling about AI eating everything in sight — who knows! After living through enough market cycles, it's become clear to me that an investor's reward function is maximized by studying businesses, not by reacting to macro headlines. That's very different from ignoring the macro picture altogether.

For this quarter, of the 27 stocks, 80% of these stocks beat the benchmark delivering an average out-performance of ~22%. The other 20% had an average underperformance of ~8%.

Top five contributors were Acutaas Chemicals, Cholamandalam financials, Solar Industries, Thyrocare and Navin Fluorine.

Exhibit 1: March 2026 – June 2027 portfolio attribution analysis

In this newsletter, we talk about the importance of sector selection in generating alpha:

"Many shall be restored that now are fallen and many shall fall that now are in honor." – Horace, (seen also in the first page of "The Intelligent Investor").

7x miss got me thinking

Right after the Russia/Ukraine war, one of my mentors — who is also a client — called to discuss Apar Industries as a potential pick. The idea didn't instantly appeal to us: we felt the elevated EBITDA/ton and other metrics weren't sustainable, since we expected supply to quickly emerge and douse the global conductor boom.

The stock is up 7 times since then, and our FY24 return would have been higher had we increased our weight in the capital goods sector back then. What held me back was the memory of the 2003–2007 cycle, when capital goods had a similar run but the rally ultimately faltered as companies turned risk-averse and stopped investing in capex.

I've come to believe the solution to a conundrum like this is to get early in the cycle by tapping the collective wisdom of markets and giving the thesis time to play out (like the one on impending capex boom suggested by Russell Napier in [2022](#)).

Deflation vs Inflation

The Apar Industries episode piqued my interest tremendously. It got me thinking that my entire investing career was built between 2008 and 2020, a deflationary era — while in the post-2022 inflationary era, the businesses that worked well earlier were resource- and raw-material-constrained, and so may not do as well fundamentally.

Historically, we have always prioritized allocating capital toward structural sectors with shallow cyclicity, such as Consumer, Banks, and IT. Our bedrock was always "Quality"—we invested in companies with solid fundamentals, managed by promoters with integrity, and focused on immediate earnings growth rather than just the promise of it.

But the Ukraine war changed everything. The US Fed raised rates by 5% in just one year. In India, we saw dormant sectors like defence, power, energy, and industrials suddenly wake up after 5 to 10 years of stagnation.

We have realized in hindsight that the missing link between quality, growth, and high returns is picking the **right sector**. So we built a framework that could potentially capture inflections in sector shifts by conducting a 15-year study to figure out if leading sectors can be identified during periods of market distress.

"There is a tide in the affairs of men, Which, taken at the flood, leads on to fortune;" – William Shakespeare's play, *Julius Caesar*

Right Sector Trumps Everything

Following chart highlights the sectors that are performing well as a group during a correction:

Exhibit 2: Sector Strength Chart (June 2018-March 2026)

1. **X-axis:** Periods of stress in the market; Y-axis: Sectors
2. **A bubble appearing** = that sector showed up strongly during that correction
3. **Bubble size** = How many stocks participated (Breadth)
4. **Bubble colour** = confidence level.

Dark green means the sector was standing out very clearly — both statistically unusual plus breadth, light green means moderate strength and white outline means it barely survived.

Basically, greener and larger the bubble stronger the sector during a broader market correction. Repeat signal has higher information value than a standalone signal. As an example, during the covid months of March-June 2020, Healthcare, IT and FMCG sectors produced repeat signals. Once a sector shows up in this inflection screen, our usual diligence process kicks in, and we raise allocation in companies that meet our bottom-up criteria of quality and growth.

So, what was the detailed back-test exactly?

The 5-Step Process to pick the strongest sector in a correction

Step 1: The Stress Test

We monitor the stock market specifically for "panic days" (using breadth indicators) when the overall market is dropping heavily. Most stocks sink during these times, so we are looking for the rare, resilient companies that are swimming against the tide.

Step 2: Spotting Strong Industries

On those bad market days, we group the surviving stocks by their industry. If a large number of companies in one specific area (like Healthcare or Capital Goods) are rising together while the rest of the market falls, that's a signal of a strong industry group. For example, during the 2025 correction, healthcare, metals & mining, and chemicals emerged as the strongest sectors.

Step 3: Grading and Ranking

We run a scoring system to separate the true achievers among the strongest industry groups, looking for groups showing massive, unusual strength in pricing and breadth compared to other sectors. The most exceptional industries get ranked at the very top.

Step 4: Building the Portfolio

Once we identify the top-ranked, battle-tested industries, we gather their strongest performing stocks. We bundle these specific companies together into a single, ready-to-buy basket.

Step 5: Proving the Track Record

We then test our baskets against over 15 years of index performance to measure exactly how well they performed 1, 2, and 3 years later, ensuring the strategy consistently beats the broader market.

Results below:

<u>2010-2026</u>	1Y	2Y	3Y	<u>2010-2026</u>	1Y	2Y	3Y
Lifecycle Stage	Avg Alpha	Avg Alpha	Avg Alpha	Lifecycle Stage	Win Rate	Win Rate	Win Rate
Fresh	+10.4%	+29.0%	+36.6%	Fresh	54%	58%	57%
Second Repeat	+10.6%	+28.2%	+41.6%	Second Repeat	66%	66%	74%
Third Repeat	+11.0%	+17.8%	+24.0%	Third Repeat	57%	54%	54%
Mature Repeat	+20.6%	+56.3%	+90.9%	Mature Repeat	66%	78%	85%

Lifecycle Stage	Details
Fresh	Never seen before in last 12 months
Second Repeat	Appeared once in prior 12M
Third Repeat	Appeared twice in prior 12M
Mature Repeat	Appeared 3+ times in prior 12M
Alpha	Extra return earned above Nifty 50
Win Rate	Success rate against Nifty across all occurrences

Exhibit 3: Back-test Results (2010-2016); Simple Returns

Conclusions from the 15-year study on sector strength:

- **Established trends are the most profitable:** Industries that have repeatedly proven their resilience ("Mature Repeats") offer the highest overall returns by a wide margin.
- **Proven leaders are the most reliable:** These battle-tested industries successfully beat the broader market up to 85% of the time, making them much safer bets than brand-new trends.
- **Patience pays off:** Across all categories, holding onto these strong baskets of stocks for two to three years leads to significantly enduring and more consistent results than selling after just one year.

One doesn't necessarily have to be early. Alpha seems to persist over repeat signals. Time is a friend of stronger sectors – alpha and strike rate sustain over longer time frames.

The Bottom Line:

To generate consistent alpha, invest your money in resilient sectors (large green bubbles) — preferably the ones that have repeatedly shown strength in the past twelve months.

As finance researchers [Moskowitz and Grinblatt](#) found in their 32-year study across 20 industry sectors, a sector's overall momentum drives most of the outperformance over 6 to 12-month periods. Ultimately, individual winning stocks tend to be heavily clustered within a few specific industries.

In the recent market correction of March 2026, Healthcare (Mature Repeat) and Industrials (Second Repeat) emerged as repeat signals, as such, they should do well over medium term. To take advantage of this trend, we have Healthcare/Pharma at 32% and Capital goods at 11% of the portfolio. Capital goods allocation should go further move up as and when we find companies at the right valuation.

DISCLOSURES WITH ADVICE

1. The portfolio manager may have holdings or positions in the securities advised. The portfolio manager has no connection or association with any issuer of products/securities advised.
2. The portfolio manager has no actual or potential conflicts of interest arising from any connection to or association with any issuer of products/securities. This includes any material information or facts that might compromise their objectivity or independence in providing portfolio management advisory services.
3. Resources for securities information: To access key features of securities, particularly performance track records, the following links are provided:
